

Rechargeable LED Night Light

How to use ?

1. Use as portable light

Press the side button, front panel light turns on, press it again, top light turns on, press one time more and light will turn off.

2. Use as motion sensor night light

In darkness, front panel light will automatically light up to low brightness setting, it will change to high brightness setting when motion is detected, it will go back to low brightness setting in approximately 30s, with undetected motion.

At daytime or a bright area, the night light will be on for approximately 15s when plug into outlet if there is no power outage, and then turn off automatically, whenever if there is motion detected or not.

3. Use as emergency light / power failure light

When unit is plugged into outlet, front panel light will turn on automatically when there is a power outage.

How to charge the night light ?

Plug into outlet and the unit will automatically charge when there is no power outage, it will stop charging automatically, when it is fully charged.

Please note: if there is a wall switch or fixture switch, please keep that switch on, otherwise the unit will not charge.

Specification

Dimension	111*58*30mm	
Weight	94g	
Input Voltage	AC120V 60Hz	
Battery	3.7V 500mAh	
Charging Time	12 hrs	
Time Delay	30s+-5s	
Detect Distance	2-4m	
Sensor Angle	90°	
Runtime	Top > 3 H	Front Panel > 3 H
Brightness	Top > 50 LM	Front Panel > 60 LM
